

KAON BARE

CORONARY STENT

KAON BARE Coronary stent

KAON, an elementary part, essential for companies who want to start or continue their business in interventional cardiology.

KAON is a state of the art balloon expandable coronary stent, developed and manufactured by the Fortimedix stent engineering group. The stent design provides for excellent performance characteristics. The reinforced end-crowns feature wider struts than those of the stent body, which improves ease of implantation and visibility under fluoroscopy. In combination with our proprietary polishing technology, we are able to provide our customers with a first class, competitive stent product.

Versatilities of the unique KAON stent design are:

- Exceptional flexibility
- Minimal foreshortening
- Homogeneous coverage
- Outstanding vessel conformability
- Excellent side branch access
- Superb radial force
- No flaring.

KAON offers a wide range of products with stent lengths from 9 up to 33 mm.

Stent specifications

Description	Closed cell design featuring integral flexibility and homogeneous coverage
Material	316L stainless steel
Foreshortening	<2%
Recoil	<5%
Expanded metallic surface	11-17%
Strut dimensions (W x T)	0.11 x 0.10 mm
