

PRODUCT MANUFACTURING

Product Manufacturing

We recognize that the value of our company to the Medical Device Industry depends on the coherence between our business processes and those of our customers. Therefore, Fortimedix offers a comprehensive range of services and products taking your project from the initial concept through to manufacturing and beyond. With this unique approach, we are targeting professional, long-term partnerships. Combined with our One-Stop-Shopping philosophy, we are able not only to identify unmet needs in human healthcare, but also to provide our customers with powerful innovations that really make the difference.

Stent Manufacturing

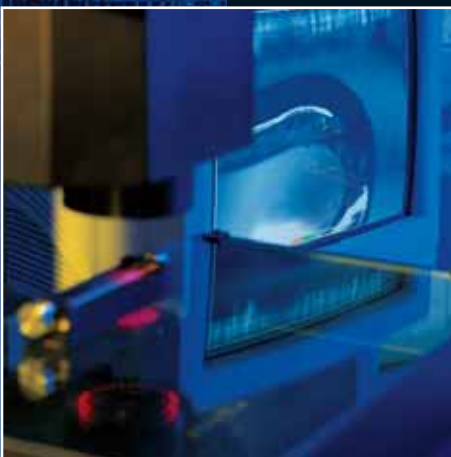

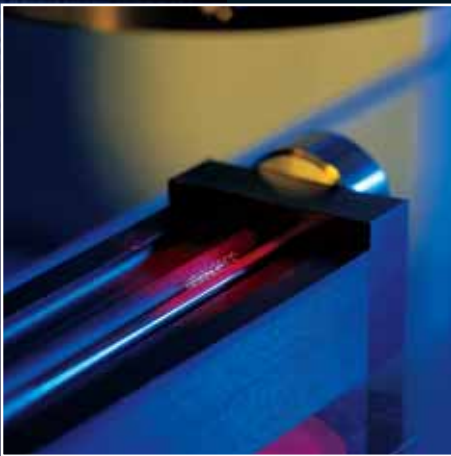

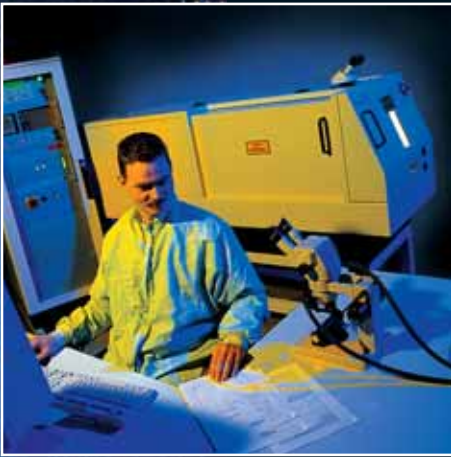

By having in-house stent manufacturing capabilities, we have full and absolute control over key manufacturing technologies like laser cutting, electropolishing as well as annealing techniques. This enables us not only to shorten stent product development cycles dramatically, but also to respond even faster to ever changing market demands.

Through our infrastructure, in combination with very short throughput times, we guarantee your Just-In-Time production capacity. As a result, we are able to significantly reduce your inventory levels, giving you the flexibility you want.

We can either supply you with a stent that we exclusively design for your company or we can manufacture your existing design. Of course, we can also provide you with volume production quantities of one of our OEM stent products.

Contract Manufacturing

In line with our One-Stop-Shopping philosophy, our Product Manufacturing business unit has added several Contract Manufacturing activities to its line of services. Amongst others, we offer stent crimping, using our own unique patented Crimper, and stent retention enhancement activities. Packaging, labelling and sterilization are services we can also provide on a contract basis. By offering these services, our customers enjoy the additional benefits of minimising risk and maximising flexibility. You benefit from specialist expertise, without incurring large internal fixed costs.
